Configuration Profile

- The keyboard supports 4 onboard profiles. You can switch between them via the driver or directly on the keyboard using FN key combinations, even without the driver.

Configuration 2 Switch successful, X button flashes green 3 times

Configuration 3 Switch successful, X button flashes blue 3 times

Configuration 4 Switch successful, X button flashes orange 3 times

Magnetic Switch Configuration

- Used with the driver, which supports a variety of magnetic switch functions.
1. **Dynamic Keystroke (DKS):** Allows a single key to trigger 1 to 4 different functions based on different press and release depths.
 2. **Multi-Point Trigger (MPT):** A single key can activate up to three different functions at three separate actuation depths.
 3. **Hold/Tap (MT):** One key performs two actions — one when held, another when tapped.
 4. **Toggle Mode (TGL):** A single tap toggles continuous activation; holding the key triggers normal behavior.
 5. **Release Trigger (END):** Sends a secondary action when the key is released.
 6. **SOCD Function:** When two keys are pressed, the latter overrides and releases the previous one, ensuring only one is active at any time.
 7. **Rapid Trigger (RT):** Dynamically adjusts actuation and reset points based on press/release intention for ultra-fast response.
 8. **Visualized quick calibration** for magnetic switch travel.
 9. **Real-time visual monitoring** of magnetic switch travel distance.

- Magnetic switch calibration is available in the driver. Users can view flux values of each key. During calibration, pressing a key will turn it green. After completing, save the calibration settings.
- The driver allows 0-dead zone settings to ensure maximum magnetic switch precision.
- **Standard/Pro Version:** Key latency as low as 0.1ms.
- **MAX Version:** Key latency as low as 0.08ms.
- Up to 4 customizable layers supported in the driver, including 3 programmable FN layers.
- The keyboard supports FN key combinations to open webpages. Default preset:

Note: When using this feature, ensure the keyboard input method is switched to English language mode for optimal functionality.
